

SignalForce

The open-source GTM
engineer toolkit

Signal-based prospecting,
configurable for any ICP

Presenter note

A portfolio project demonstrating
full-stack architecture, AI integration,
and product-minded engineering.

Stop sending emails nobody reads.

Traditional Outbound (Failing)

- Buying static lists.
- Sending generic templates.

Result: **1% reply rates**, Blind and annoying.

**Timing beats
targeting.**

Signal-Based Reality

- Buyers **leave digital footprints** when ready to buy.
- Writing code, publishing ArXiv papers, hiring, getting funded.

Result: Outreach **timed to actual behavior**.

Find them exactly when they care.

Key Takeaway: Every message references the prospect's actual, recent work—timed precisely to when they are solving the problem.

The 3-Layer Architecture

1. Detect (Raw Signals)

Python scanners pull real-time data from external APIs (GitHub, semantic scholar, job boards, LinkedIn).

2. Think (AI Skills & Logic)

The engine uses the Gojiberry formula to score intent, grades ICP fit, and uses Claude AI to research targets and write hyper-personalized copy.

3. Act (Automation)

System enriches contact info via waterfall APIs and automatically syncs with CRMs (HubSpot) and senders (Instantly).

Decoupled architecture: Human-driven and fully automated paths use the exact same underlying logic.

Built for any Go-To-Market team.

13 AI Skills

From /signal-scanner to /email-writer. Chat with Claude to run complex workflows step-by-step.

Any ICP

Agnostic and configurable.
Sell cybersecurity? AI infra?
Dev tools?
Change one config.yaml file
and the engine adapts. Ships
with 4 ready-to-use templates.

Free to Start

Open-source core. Use free
APIs and your own inbox to
start hunting high-intent
targets at \$0.

Two ways to run your week.

The Results: Why Signal-Based Outreach Wins

Metric	Industry Median	SignalForce Targets
Open Rate	20–30%	45–65%
Reply Rate	3–5%	12–20%
Positive Reply Rate	1–2%	5–8%

**4x
Higher**

Insight: Target a 12–20% reply rate because every email references a specific, recent, real action—not a static list attribute.

What this project demonstrates about its builder.

Start free, scale when revenue justifies it.

High-leverage
architecture
that scales with
the business.
